[Node Js Php Serialize Example](#)

JSON on the Server Side

- On the server side, there is PHP, ASP.NET, Node.js, Ruby on Rails, Java, Go, and many, many more
- As a web client, we send requests for resources to a server using HTTP. The server responds with a document, such as HTML or JSON. When that document is a JSON document, the server side code must handle the creation of it.
- Here will be seeing example in PHP:

PHP also includes built-in support for serializing and deserializing JSON. PHP refers to this as encoding and decoding JSON. From the perspective of PHP, JSON is in a coded format. Therefore, to serialize JSON, the "json_encode" function is called, and to deserialize JSON, the "json_decode" function is called.

Serialization is the act of converting the object into text.
Deserialization is the act of the text back into an object.
